

FOREWORD

The special relationship between the southern part of the South American continent and Antarctica has its origin in the common past of the two regions as part of the Gondwana continent, and in their close vicinity up to the present day as compared to the distances between the Antarctic and the other surrounding continents. Under present-day conditions, the interchange between Antarctica and South America is largely restricted by deep water (up to 5000 m) in the Drake Passage and by the circumantarctic current system. At some point in the past, however, these areas must have started from a common ecosystem base, developing their specific characters in a long process which was accelerated once the distance between them began to increase. Climate essentially cooled during this period, but also underwent intermittent periods of warming which may have interrupted the process of separation and facilitated phases of biotic exchange. This exchange may have lasted longer, and have been more intense, with the South American continent than with the other landmasses surrounding Antarctica (which were separated earlier and drifted farther apart). Present day marine fauna and flora on either side of the Drake Passage reflect the regional development in the past, including periods of isolation and interchange, extinction and radiation, and represent a singular case study of ecosystem change and evolution within a worldwide perspective.

It was this uniqueness of relations between the Magellan region and the Antarctic, and the scarcity of information available on them, that induced the two co-organizing institutions to call for a specific meeting with the objective of assessing the state of the art. The international workshop “Marine biological investigation in the Magellan Region related to the Antarctic” (Investigación Biológica Marina en Magallanes relacionada con la Antártida, IBMANT/97), co-organized by the Universidad de Magallanes (UMAG, Chile) and the Alfred Wegener Institute for Polar and Marine Research (AWI, Germany), took place at the UMAG, Punta Arenas in April 1997. It was mainly based on the Joint Chilean-German-Italian “Victor Hensen” Magellan Campaign in 1994 and additional results from “Vidal Gormaz”, “Cariboo”, “Italica”, “Hespérides” and “Polarstern” cruises during the past decade (see refs. in individual papers), but also included work from the shores of Argentina and Chile. Altogether 86 participants from Chile, Germany, Italy, Argentina, Spain, the United Kingdom and Belgium attended the workshop, 43 oral contributions and 42 posters were presented, and eight working groups discussed specific questions. Besides treating more specific issues of the Magellan region, the meeting was the first in recent times to address the connections between the fauna and flora of the southern tip (“cono sur”) of South America and the Antarctic in more detail. This volume contains 56 contributions related to the conference theme. It tries to provide an accurate summary of the current state of knowledge, the balance of which has improved considerably for Antarctic waters in recent years but much less so for the Magellan region, and remains unsatisfactory from a comparative point of view. We are aware that this workshop could only be a first attempt at reviewing such a large subject area, but it will hopefully stimulate international interest in the region and provoke further meetings of a similar nature.

The IBMANT/97 workshop and the publication of these proceedings have been supported in many ways, and the editors would like to express their gratitude to the following persons and institutions:

Ref. 124 “Scientific-Technical Cooperation with North and Latin America” of the German Ministry of Education and Research (BMBF), Bonn, especially its head, Dr. Horst Hertrich, and the International Bureau of BMBF, in particular Dipl. Phys. Matthias Hermes, for continuous

encouragement, travel funds, and funding the publication of these proceedings; - Universidad de Magallanes (UMAG), Punta Arenas, represented by its Rector Dr. Victor Fajardo and the Director of the Instituto de la Patagonia, Dr. Mateo Martinic, for housing and partial financing of the IBMANT/97 workshop, excellent facilities during and a great venue at the end of the meeting, and for support to the counterpart activities on the Chilean side and to numerous guest researchers; - Alfred-Wegener-Institut für Polar- und Meeresforschung, Bremerhaven, represented by its Directors Prof. Dr. Max Tilzer, Prof. Dr. Jörn Thiede, and its Administrative Director Dr. Rainer Paulenz for funding the Joint Magellan "Victor Hensen" Campaign, contributing to the IBMANT/97 workshop, and supporting the exchange of AWI members with their Magellan counterparts; - Italian National Programme for Antarctic Research (PNRA), for supporting the participation of Italian scientists in the cruise and in the workshop; - Comité Oceanográfico Nacional (CONA) and Servicio Hidrográfico y Oceanográfico de la Armada de Chile (SHOA) and its directors, Cap. de Navío Hugo Gorziglia Antolini and Cap. de Navío Rafael McKay Backler, for facilitating the work of the German research vessels "Polarstern" and "Victor Hensen", strongly supporting scientific work on RV "Vidal Gormaz" and providing counterpart facilities on this vessel; - Intergovernmental Oceanographic Commission (IOC) of UNESCO, Paris, and Scientific Council of Antarctic Research (SCAR), Cambridge, for facilitating the participation of several scientists in the workshop; special thanks in this context to Dr. Gunnar Kullenberg and Dr. José Valencia.

Furthermore the editors acknowledge that the IBMANT/97 workshop was also held under the auspices of the following Chilean institutions: Comisión Nacional de Investigación Científica y Tecnológica (CONICYT); Sociedad Chilena de Ciencias del Mar; Instituto Antártico Chileno; and Gobierno Regional de la XII Región.

Our sincere thanks for support in various ways go to the following enterprises in Punta Arenas: ULTRAMAR Agencia Marítima Ltda.; Empresa Nacional de Petróleo, Magallanes; Sociedad Administradora Zona Franca; The British School Language Institute; Supermercados COFRIMA; and Forestal Trillium Ltda. They have all contributed to the success of the workshop.

Last but not least, the editors would like to express their special thanks to Dr. Ingo Wehrtmann for his excellent assistant editor's work and his untiring efforts to meet the ever-changing demands of many authors; to Prof. Dr. Victor Ariel Gallardo, Chilean organizer of the "Victor Hensen" Campaign, for his efforts to involve other Chilean researchers and institutions; to Lic. Erika Mutschke, for efficient secretarial assistance during the conference; to the Publishing Department of "Scientia Marina", particularly Dr. Carles Pedrós-Alió and Mr. Jordi Corbera, for assistance and great patience during the publication process. Very special thanks also go to the 100 colleagues who have been involved in the peer review process and have contributed substantially to the improvement of these proceedings, particularly to Dr. Alistair Crame who kindly eliminated our worst language errors in the Foreword and the Summary Review. An alphabetical list of referees is given at the end of this volume.

Finally the senior editor would like to thank Dr. Josep-Maria Gili, who supported publishing these proceedings as a volume of "Scientia Marina" from the beginning, and provided a stimulating environment and excellent working facilities at the ICM Barcelona to finish them within the frame of a "Humboldt-Mutis Award" of the Spanish Ministry of Education and Culture. This volume is publication no. 1751 of the Alfred Wegener Institute for Polar and Marine Research.
